OpA1 is a document and project that ODBIT started production in on Janurary 3, 2025 and is expected to end on January 3rd, 2026. If you have found these documents, please be honest and respectful and do not dig deeper into these notes. Report these to ODBIT Officials and send it back to the right person using a trusted mail source, or deliver it hand to hand. Without any more talking on this subject, this will now transition into plans for OpA1.

Plans:
OpA1 will have future plans of many things. This will go in sequence from upcoming, to last.
A. Explore the psychiatric behaviors of online daters. This will be useful for a sting operation set to be before 26.
B. We will study the characteristics on online daters. This will also be useful for executing our sting operation plan.
C. We will then find up to 10-20 people to go into different servers of Brookhaven RP. They will dress as an online dater and have the behaviors of online dating to lure people into falling for our trap. It will be clear we are saying, "ABC for <bypass to say boyfriend/girlfriend>" and we may end up finding the right people to confront later on in the sting operation.
D. We will confront these people, and if we need to, end up filing police reports to their local authorities if there is serious actions going on including pedophilliac behaviors, sex offenders, people trying to meet up in real life, etc.
E. We will come to a close, but before we do that, we will need to do a few more things. We will need to find and contact ROBLOX administrators, and report an entire list of online daters to ban them and they will hopefully learn their lesson.
F. As the project is closing, we will hopefully get enough funds to pay the 10-20 people their deserved fund for helping out on our operation.
G. Finally, the project will be closed and our interns will leave ODBIT, or continue to stay due to their option.

This project will be prioritized to main catalouge. This is a top secret document and if anyone gets ahold of this, will be terminated immediately. Please read Jan3rd Guidebook for more information on these topics.

This page is classified under internal OpA1 expansion protocol. Do not share this without clearance. This continues directly from the above listed project actions and will elaborate further on the methods and branches used during the planning, preparation, deployment, and finalization of OpA1.

Phase II: Deep Psychological Profiling

We will begin by segmenting the online dater population into specific archetypes. These archetypes are commonly reoccurring and will assist us in determining high-risk individuals more efficiently.

Archetype 1: "The Flirtatious Baiter"

- Often found initiating romantic dialogue first.

- Usually aware of ROBLOX rules but finds loopholes in wording (e.g., "abc for bf/gf," "date me in RP only," etc.)

- Can escalate behavior quickly if reciprocated.

Archetype 2: "The Manipulator"

- Appears mature for their avatar or expresses real-life maturity.

- Attempts to emotionally hook others through compliments or sympathy traps.

- May claim to be in distress or looking for emotional support, luring younger players.

Archetype 3: "The Secretive One"

- Avoids chat in public and whispers users.

- Uses Discord, Snap, or other off-platform sources to carry conversations.

- Will often ask people to "go private" or use coded language.

These archetypes will allow our decoys to effectively mimic behavior, lure targets, and collect relevant behavioral data. This information will also serve as a resource for future reference in

other operations. All psychological logs and notes will be stored in the **OpA1 Behavior Tracker File** on the secure server.

Phase III: Decoy Deployment Operation "Mirrorfield"

A codename has been chosen for the decoy deployment phase — "Mirrorfield."
 The purpose of Mirrorfield is to act as a reflection — mirroring online dater behavior in order to draw them out of hiding. It must be executed with **extreme caution and high-level disguise** to prevent detection by ROBLOX's AI moderation tools and/or untrained staff members who may report our operatives.

Each operative will receive the following:

- A modified avatar for disguise (not resembling any known ODBIT staff)

- Custom phrases and scripts to use during the sting

- A secure Discord or chat log system to document interaction

Each decoy will run a **minimum of five trials per week**, documenting targets who show consistent dating behavior or any indication of predatory tendencies. We aim to build **complete evidence chains** including:

1. Screenshots and/or screen recordings (OBS Studio preferred)

2. Time-stamped logs with behavioral annotations

3. Audio files if in-game chat is enabled

Once a potential offender is identified, they are added to the **StingWatch24 Roster**, which is reviewed weekly by the StingOps team. Only after three instances of confirmed interaction will a confrontation be authorized.

Phase IV: Direct Engagement & Confrontation

Upon confirmation and approval by senior ODBIT officials, agents will be given access to "Confrontation Mode." This is a secure setting in which the operative will:

- Reveal they are from ODBIT

- Address the specific behaviors shown

- Inform the individual they are under observation

The target will then be given a chance to respond. We will document their response and determine next steps. If the person becomes defensive or exhibits extreme behavior (threats, self-harm talk, etc.), we immediately escalate the case to a licensed professional (contracted therapist or psychological reviewer, TBA).

In extreme cases of possible illegal activity or suspected predation:

- The suspect's IP address, server ID, and all usernames used are gathered

- Local authorities are notified using the **OPRO1 Law Liaison Package**

- A full report is written, submitted, and archived

Phase V: Community Outreach & Internal Reform

To ensure long-term impact and user safety, OpA1 will include a branch for **educational and community awareness** efforts.

This includes:

- A short 3-minute PSA (Public Safety Announcement) video to be shown on YouTube and Twitter/X

- A kid-friendly version of the warning message for distribution to ROBLOX parents

- A new ODBIT Guidebook Chapter titled "How to Spot Grooming in Disguise"

- Official collaboration with up to 5 digital safety nonprofits or parent watch groups

We believe in not just targeting offenders, but also **preventing** harm through awareness. Our interns and staff will be required to undergo monthly training during this stage to ensure we are equipped to answer parent and press questions in a professional manner.

Phase VI: Internal Review, Compensation & Archival

After the final sting operation (target date: December 10, 2025), we will begin our internal review stage. This includes:

- A full audit of all collected evidence

- A report on user behavior trends

- Documentation of moderator response time

- Feedback forms from operatives

Based on this review:

- Staff who participated in 10+ sting sessions will receive full payout compensation (amount TBA, based on remaining budget)

- Bonuses will be given to top 3 most effective operatives

- Interns may receive school or organizational credit if pre-approved

- The OpA1 Summary Booklet will be published internally and archived in the classified files

By January 3rd, 2026, all active files will be frozen and stored under the "Year One Archive." Only select staff will be granted retrieval access.

Appendix Notes

- **If you are reading this and are not part of the OpA1 team**, cease reading immediately. This is not for public view.

- Violation of this policy will result in immediate blacklisting from ODBIT and contact with cybersecurity law enforcement.

- All files, logs, and participant names are to be encrypted under protocol ODB-CRYPT-A1.

- ODBIT CEO has marked this document as open source **for controlled, internal reproduction only**.

For further instructions or to volunteer for review work, contact the **OpA1-Admin Hub** via secure mail or Discord DM (ID located in internal system).

End of current document expansion. Await further notice.
